

IT'S "JUST" MARIJUANA

This **free workshop** will provide participants with information about the immediate and long term effects of THC, the active ingredient found in marijuana. The addictive properties of this drug and its impact on the developing brain will be shared, as well as a current overview of the local, statewide and national laws regarding marijuana dispensaries.

In recent years, the perception of marijuana use as a harmless pastime has dramatically increased. More and more, people have expressed the opinion that "it's just marijuana."

As a result, the perception of marijuana as "risky" is very low, especially among our youth.

WHEN

Friday, January 27, 2012
Registration 8:30 am
Training 9:00 am -- 11:30 am
